Training a foundation image model and deploying it to millions of users

"a bottle of wine on a marble table" 200 GPU hours

"a bottle of wine on a marble table" 1300 GPU hours

"a bottle of wine on a marble table" 11 000 GPU hours

"a bottle of wine on a marble table" 50 000 GPU hours

About R Photoroom

ALL

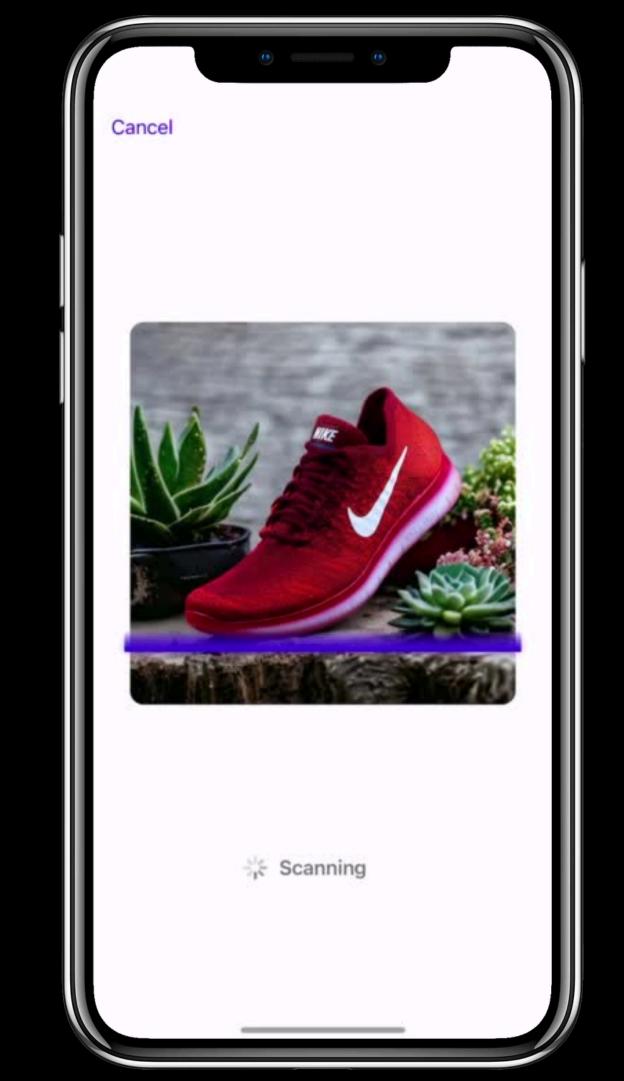

We help sellers create images that sell

- Trusted by Amazon, Decathlon, Doordash
- 200+ million downloads
- Available on Mobile, Web, and API

Lyline LIM Head of Impact & Sustainability at Photoroom

Why train a model from scratch?

August 2022 - Launching our GenAl hackathon

Ni 🛼 .ill 100%

Done

Well done!

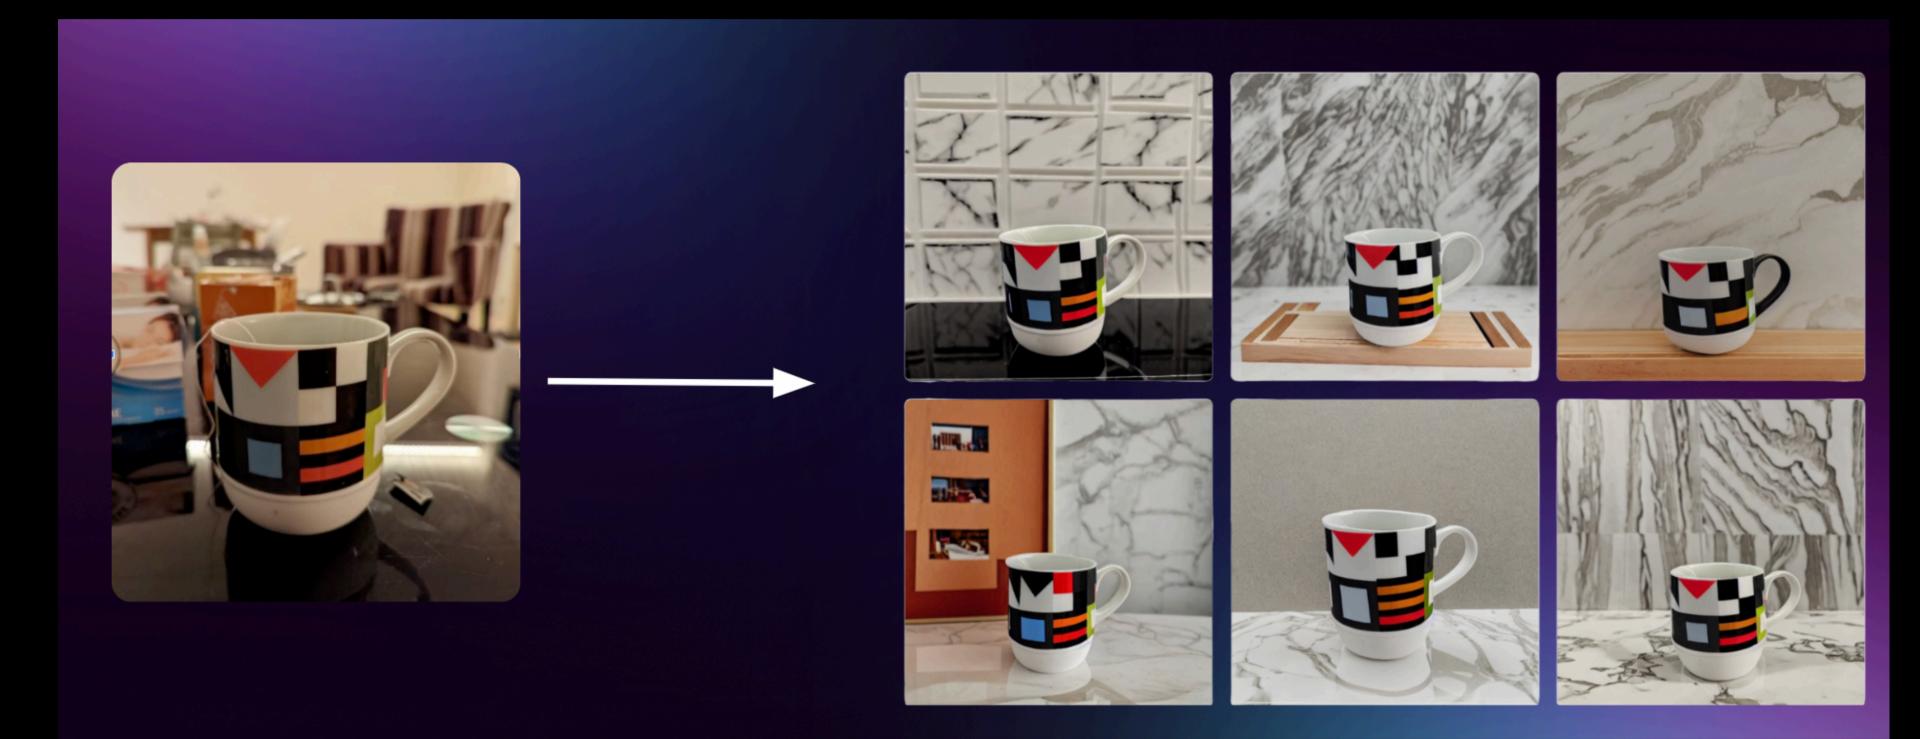

Your images are being generated...

Keep an eye on your inbox for an email from us (on a wooden table), you'll receive your images in a few minutes.

3 minutes

1. Quality matters

2. Speed matters

Annual Recurring Revenue

Why train a model from scratch?

Quality Speed Control

How does diffusion models work?

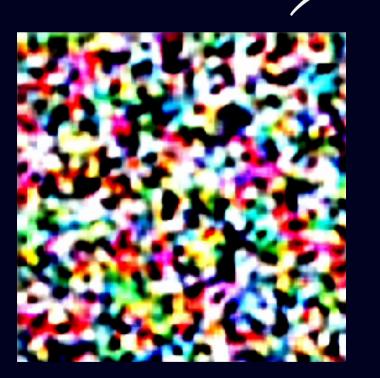

How diffusion works in 1 minute

"a bottle of wine on a marble table"

"a bottle of wine on a marble table"

How diffusion trains in 1 minute

"a bottle of wine on a marble table"

"a bottle of wine on a marble table"

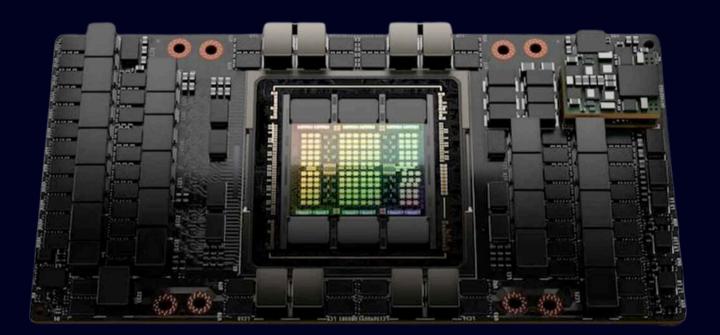

"a bottle of wine on a marble table"

3 key ingredients of an image model

Compute Algorithms Data

700W per GPU

- \$30-\$40k
- 8 per machine

				100 - 201			

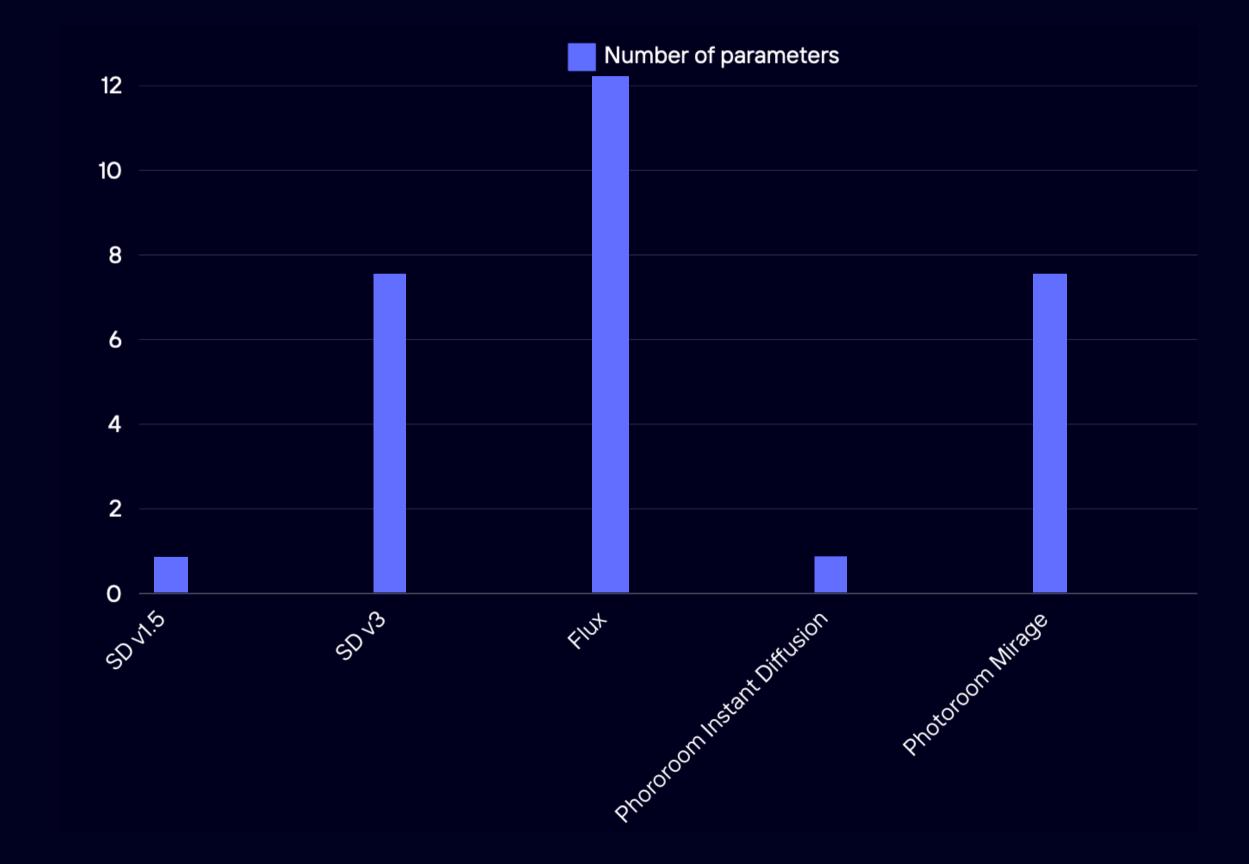

Photoroom's Al cluster

3 key ingredients of an image model

Compute $\overline{\checkmark}$ Algorithms Data

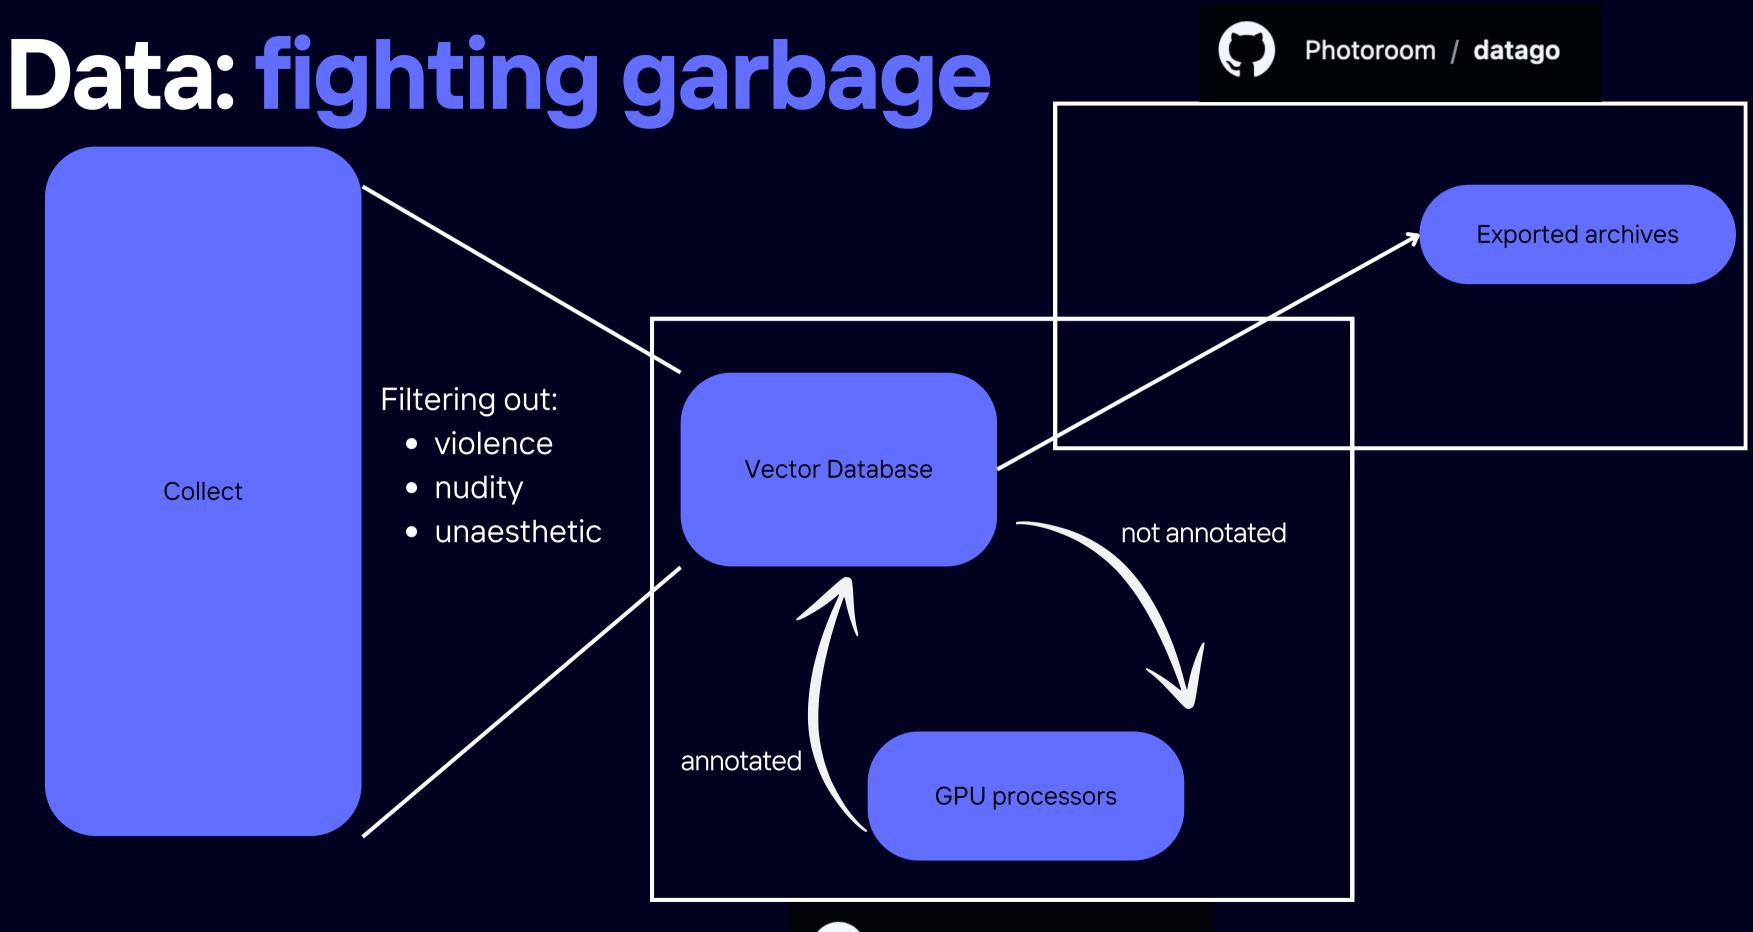

Algorithm: picking the right architecture

3 key ingredients of an image model

Compute \checkmark Algorithms \checkmark Data

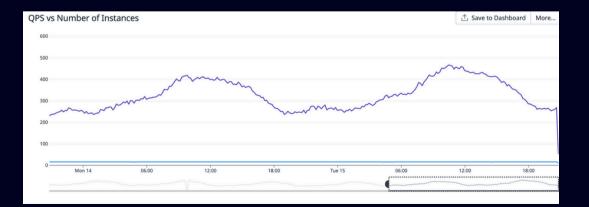

How to deploy to millions of users?

Inference: infrastructure & software

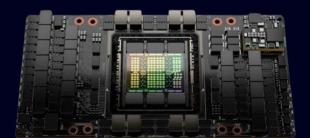

We built our own model to answer customers needs

Quality Speed Control

Thank you!
